CASE STUDY · AI AGENT BUILDER INTERNSHIP

Who should Heidi call first?

An AI-assisted pipeline that finds, qualifies and ranks Berlin property managers for Heidi's metering and billing services.

Maryam Rani · November 2026

The task behind the task

Not “which Hausverwaltungen exist in Berlin?”

but “who should sales call first, and why now?”

31.12.2026

Existing heat and hot-water meters must be remotely readable (HKVO §5).

−3%

Tenants may cut their heating-cost share if a building is not converted in time.

1 decision → many buildings

A property manager chooses the metering provider for its whole portfolio.

Sources: Heizkostenverordnung (HKVO) §5; VDIV partner overview (Heidi Systems is a VDIV partner)

From public directories to a ranked call list

1
Discover
Crawl a public A–Z directory, plus seeds for large managers

→

2
Clean
Deduplicate, keep Berlin postcodes, log every exclusion

→

3
Enrich
Read services and Impressum; rules + Gemini extract facts

→

4
Score
7 KPIs, separate confidence, review flags, sales angle

→

5
Verify
Human check of the top 25 and a random sample

Hallucination guard
Every LLM claim needs a verbatim quote that exists on the page and supports the field.

Resilient
A retired model (404) and overloaded models (503) are handled by a fallback chain.

Responsible
robots.txt, rate limits, Impressum never sent to the LLM, no LinkedIn scraping.

Python · requests + BeautifulSoup · Gemini API (provider-agnostic: Claude or OpenAI with one setting) · pandas → Google Sheets

Seven KPIs, scored only on evidence

KPI	Max	What we look for	Why it matters to Heidi
Service fit	25	Rental and/or WEG management	Heidi bills per unit; brokers don't fit
Portfolio size	20	Units stated (proxy: staff)	One contract unlocks many buildings
Billing relevance	15	Heating / operating-cost billing	They own the process Heidi automates
Regulatory	10	Older stock, HKVO on own site	Urgency before 31.12.2026, no assumptions
Switching	10	Metering partner, in-house billing	A concrete switch conversation
Digital maturity	10	Tenant portal, named software	Easier dashboard integration
Reachability	10	Decision maker, email, VDIV	Sales needs a person; shared VDIV channel

A ≥ 70 **B 50–69** **C < 50**

Confidence is reported separately: a strong-looking lead with thin evidence goes to research, not to sales.

Results: a funnel you can audit

385

Berlin candidates discovered

375

unique property managers after cleaning

81%

of websites fetched and analysed (304)

6 + 54

A-leads and B-leads to call first

92%

validation accuracy: 35 of 38 random fields correct, checked by hand

89%

of 698 LLM claims passed the evidence check; the rest were discarded

~70 min

to process the whole city, unattended, on a laptop

Every number comes from the "Method & Stats" and "Validation" tabs of the Google Sheet; excluded companies keep their reason.

Three leads, three different decisions

PRIORITY A · 73/100

Ralph Management

10,000+ units, WEG + rental, and lists ista and Techem among its partners.

Angle: provider switch to remote-read metering

PRIORITY B · 67/100

Promeda Hausverwaltung

4,000 units, WEG + rental, and published its own article on the 31.12.2026 deadline.

Angle: compliance review before the deadline

FLAGGED FOR RESEARCH

Wilhelm Hilpert Hausverwaltung

~10,300 units per its job ads, but a JavaScript-heavy site gave too little evidence.

Decision: manual check, not discarded

Contacts: Impressum first (legally required, current); LinkedIn only confirmed 4 of 12 top decision makers.

What I would build next at Heidi

CRM sync

Push A-leads with their evidence into the sales CRM automatically.

Change monitor

A weekly re-crawl flags new managers, new HKVO content and software switches.

Draft-only outreach

An agent drafts a first message from the evidence; a person approves it (UWG §7).

Next city in minutes

Hamburg or Munich with one config change: city and postcode ranges.
